

OA 502/602

**Rugged, weatherproof speakers
provide unprecedented clarity and
bass response outdoors!**

New Technology Provides Performance Outdoors!

Imagine enjoying backyard activities set to your own personal soundtrack playing outdoors from your home stereo system. Lounge on your deck, splash in the pool or entertain guests under the stars with music that sounds so good you'll want to keep dancing all night long!

The secret to beautiful outdoor music is a speaker system that is truly designed for playing music in the open-air. Sound acts much differently outdoors than it does indoors. Without walls for music to resonate off of, pitch and timbre of music are affected dramatically. Additionally, volume dissipates much more quickly outside than inside your home.

Audioplex designers proudly introduce the OpenAir 502 and 602 Series speakers. These speakers represent ground-breaking technological advancements. Advancements that offer detail and clarity unprecedented in an outdoor speaker and efficiency that provides excellent volume even in large outdoor areas. With Audioplex's full five-year warranty, the longest in the industry, you're guaranteed to enjoy your OA Series speakers for many years to come. No other manufacturer can offer you this level of performance and guaranteed reliability!

*The OA Series of speakers include the OA-502 (5") and the OA-602 (6").
The OA-502's handle 80 watts while the OA-602's will handle up to 100 watts.*

TECHNICAL DETAILS

Rich Bass response for Various Outdoor Areas

Available in either the 5" OA-502 or the 6" OA-602, Audioplex's new ultra-rigid Mica Cone woofer offer bass response never heard before. Specifically designed to reproduce the exact tones and timbres lost in the outdoors, the OA-502 and 602 both deliver extraordinarily satisfying deep bass and chest thumping impact.

Smooth, Natural Response with Unprecedented Clarity and Detail

These speakers are engineered to provide years of enjoyment while exposed to the elements. Choose the OA-502 when your speakers can be placed within 12 feet of your listening position and the OA-602 when you have a larger area to cover. Both the OA-502 and the OA-602 are

equipped with the exclusive Audioplex WeatherDome™ tweeter. This tweeter utilizes advanced proprietary composite materials and is the first tweeter ever produced for an outdoor speaker that exhibits truly broad bandwidth and ultra-smooth response. The result is an outdoor sound that will thrill you. Detail and clarity never before heard outside and guaranteed for 5 years!

High Technology Weather-proof Enclosures and Brackets

The OpenAir Series speakers are completely weatherproof. A revolutionary new technique enables Audioplex to cover all parts of the enclosure with a penetrating and absolutely even coating of protective material. This

coating is guaranteed not to fade, chip or peel even in the harshest elements.

Convenient Mounting Accessories Included

In addition to having a unique wedge shape for easy installation under eaves or under railings, the OA Series includes Audioplex's swiveling weatherproof

bracket, solid brass sealed bracket inserts and stainless steel screws insuring the OA Series will never rust or stain the speaker cabinet or your home's exterior. Unlike competitors that charge extra for mounting gear, Audioplex includes everything but the speaker wire for your installation.

APPLICATION NOTES

SPECIFICATIONS

OA-502

Max power input: 80 watts
Freq. response: 50 Hz - 22 KHz
Connectors: Five-way gold binding posts
Dimensions: 150cm D x 180cm W
Colors: Black or White

OA-602

Max power input: 100 watts
Freq. response: 40 Hz - 22 KHz
Connectors: Five-way gold binding posts
Dimensions: 170cm D x 220cm W
Colors: Black or White
